FOR IMMEDIATE RELEASE

Women Must Take Necessary Steps Today to Help Avoid Vision Loss

Houston, TX (March 28, 2012) – Every year, more women than men are diagnosed with eye diseases and conditions such as cataracts, dry eye, Fuchs’ dystrophy, glaucoma, macular degeneration, diabetic retinopathy and Sjögren’s syndrome. The “Vision Problems in the U.S.” study from Prevent Blindness America and the National Eye Institute (NEI) shows that of the more than 3.6 million Americans age 40 and older who suffer from visual impairment, including blindness, 2.3 million are women.

Women are more susceptible to vision issues due to longevity as well as hormonal factors, according to the NEI. To educate the public, Prevent Blindness Texas has designated April as Women’s Eye Health and Safety Month.

“Of course, both men and women need to take the necessary steps today to keep their eyes healthy in the future,” said Ruth D. Williams, M.D., president of the American Academy of Ophthalmology. “Because women have more risk of vision loss than do men, and because women have different risks than men, we want to be sure they pay heightened attention to saving their sight.”

Prevent Blindness Texas provides tips for women to keep their eyes healthy:

Get an Eye Exam- All women should make regular eye exams part of their health routine. Prevent Blindness Texas recommends everyone receive a comprehensive eye exam by age 40, if not earlier, and follow up care as recommended by an eye care professional.

Know Your Family History- Genetics plays a key role in eye disease. Research your family’s health history and notify your eye care professional of any eye diseases that run in the family.

Eat Healthy- A diet rich in beta carotene, lutein, zeaxanthin, zinc and omega-3 fatty acids can also help guard against vision loss from eye disease.
**Take Supplements** - Antioxidants have been shown to actually reduce the progression of some eye illnesses, including AMD. Vitamin A, riboflavin (vitamin B2), vitamin C and zinc are good sources to help maintain eye health. Consult your physician before taking any vitamins or supplements.

**Quit Smoking** - Smoking, even second-hand smoke, increases the risk of eye disease.

**Wear UV Eye Protection** - When venturing outdoors, Prevent Blindness Texas recommends wearing brimmed hats in conjunction with UV-rated sunglasses (labeled: absorbs 99-100 percent of UV-A and UV-B rays). UV rays are extremely dangerous to the eyes and have been linked to the development of cataracts and AMD later in life.

For more information on eye diseases or conditions with higher incidence rates in women, please contact Prevent Blindness Texas at 1-888-98-SIGHT or visit www.preventblindnesstexas.org.

**About Prevent Blindness Texas**
Founded in 1956, Prevent Blindness is the state’s leading volunteer eye health and safety organization dedicated to fighting blindness and saving sight. Focused on promoting a continuum of vision care, Prevent Blindness Texas touches the lives of thousands of people each year through public and professional education, advocacy, community and patient service programs and research. These services are made possible through the generous support of the Texas public. Through a network of regional offices and volunteers, we are committed to eliminating preventable blindness in Texas. For more information, or to make a contribution to the sight-saving fund, call 1-888-98-SIGHT or visit us on the Web at www.preventblindnesstexas.org.
